### GPC103 GUILLOTINE PULL CABLE COUPLING INSTRUCTIONS

- Install SLED pull cable and route this cable into the Guillotine cutting back the cable sleeve approximately 5 inches from the Guillotine frame and securing the cable to a bracket approximately 48 inches from the Guillotine frame.
- Install DASH pull cable and insert end of cable into the wire hole of GPC103. Clamp GPC103 to the black sleeve 1 inch from the end of the SLED pull cable (approximately 5 inches from the Guillotine frame).
- OPERATION – When pulling SLED cable, Guillotine will close and the cable can be pulled all the way out the back of the vehicle by the sled if needed. When pulling DASH cable, the GPC103 will pull on the sleeve of the SLED cable pulling the wire out of the Guillotine. The DASH cable should trigger the Guillotine by pulling the DASH knob approximately 10-15 inches.
